

2011 Lincoln MKZ Hybrid Offers More Standard Luxury Features

SmartGauge™ with EcoGuide

Gives hybrid owners a more connected, fuel-efficient driving experience by coaching them on how to optimize vehicle performance. Lincoln takes SmartGauge to a new level of engagement, giving drivers enhanced positive feedback on long-term fuel efficiency and driving performance.

Acoustic Laminated Windshield

A layer of sound-absorbent vinyl sandwiched between two sheets of glass enhances interior quietness.

Lincoln SYNC®

This voice-activated communications and entertainment system features 911 Assist™ and Vehicle Health Report. SYNC's USB port and Bluetooth capability connects to MP3 players, memory sticks and Smartphones. It includes a GPS receiver and TDI services that offer turn-by-turn route guidance and access to personalized content such as sports scores, news and gas prices.

MyKey™

Allows parents or fleet administrators to activate a restricted driving mode. MyKey features a persistent Belt-Minder® with audio mute, an earlier low-fuel warning and consistently engaged AdvanceTrac® stability control, Blind Spot monitoring and Cross Traffic Alert. Also includes audio volume restrictions, top speed limits and speed chime warnings.

Easy Fuel® Capless Fuel-Filler System

A North American industry-exclusive feature that self-seals without a traditional fuel cap.

SecuriCode™ Keyless Entry Keypad

Enables vehicle access by unlocking the driver's door using a five-digit code on the keypad system.

Integrated Spotter Mirrors

Side-view mirrors are designed with a secondary convex spotter mirror, which provides a view of the driver's blind spot.

Genuine Wood Trim

Exquisite in appearance, the Swirl Walnut and Olive Ash trims are eco-friendly too. The veneers come from well-managed forests, as defined by strict environmental, social and economic standards, and from other rigorously controlled sources.

Personal Safety System™

A suite of seven protection technologies work together to help protect vehicle occupants. The system includes dual-stage front air bags and an occupant classification system to sense whether the passenger seat is occupied. It tailors – or suppresses – air bag deployment to help provide an appropriate level of protection and features Belt-Minder, to remind front-seat occupants to buckle up.

Heated and Cooled Front Seats

Uniquely engineered to deliver exceptional heating and cooling comfort. Most heated and ventilated systems simply recycle cabin air without modifying temperature. In the MKZ Hybrid, a thermal engine, operated independently of the climate control system, heats or cools the air then circulates it to the seatbacks and cushions.

Reverse Sensing System

Senses what drivers might not see behind them and relays an audible alert if objects are near, which increases in frequency the closer a driver gets.

Bridge of Weir Leather Seats

World-renowned luxury leather from Scotland is milled for up to 12 hours to ensure a buttery, soft hand. Bridge of Weir's chromium-free tanning process makes it easier to recycle.

Power Driver Memory Seat Settings

Provides personal seating preferences anytime, with the touch of a button.

10-Way Power Passenger Seat

Designed to accommodate a diverse group of passengers, from 4-foot-10 to 6-foot-5 and 90 to 300 pounds.
