

COVID-19

Face Mask Update

Team,

We are updating our mask protocol in the U.S. removing the mask requirement in all U.S. facilities. As agreed to with the COVID-19 Joint Task Force, consisting of Ford, GM, Stellantis and the UAW, beginning today, June 21, 2022, masks will be 'strongly recommended' in counties that the Centers for Disease Control and Prevention (CDC) has designated as high-risk transmission areas and 'optional' in counties designated low to medium risk.

Team member reminders:

- Ford masks will continue to be provided for those team members who wish to wear one. Current Mask Options: You may wear a Ford mask, a personal cloth mask over a Ford mask or a personal N95 or KN95 mask.
- We will continue to monitor data across the United States to determine if additional modifications to protocols are needed.
- No matter the location in the U.S., all team members are still required to complete the daily self-certification survey and continue to comply with social distancing protocols.

Ford continues to encourage team members to get vaccinated, and to obtain booster doses when eligible. Given the unpredictable nature of the virus, we will continue to provide safety protocol updates as needed.

Thank you in advance for your ongoing support and flexibility as we continue to adjust protocols, keeping the health and safety of all team members our priority.
